5

WHAT IS CLAIMED IS:

- 1. Reinforcement structure for a front-end module carrier comprising: an upper member having a hood latch;
- a vertical member connected to a middle portion of the upper member so as to support the upper member, and
 - a lower member fixed to a lower portion of the vertical member, the lower member having a downwardly dented concave shape.
- 2. The apparatus as set forth in claim 1, wherein the lower member has a constant curvature toward its front side.
